

HACKATHON PHASE-1

```
1A) public class MuncipalWasteCollectionOptimizer {  
    public static void main(String[] args) {  
        // Vehicle details  
  
        int vehicleNumber = 2026;  
  
        double wasteCollectedKg = 1250.75;  
  
        int collectionPoints = 15;  
  
        char vehicleStatus = 'A';  
  
  
        // Displaying details  
  
        System.out.println("Waste Collection Vehicle Details:");  
  
        System.out.println("Vehicle Number: " + vehicleNumber);  
  
        System.out.println("Waste Collected: " + wasteCollectedKg + " kg");  
  
        System.out.println("Number of Collection Points: " + collectionPoints);  
  
        System.out.println("Vehicle Status: " + vehicleStatus);  
    }  
}
```

OUTPUT:Waste Collection Vehicle Details:

Vehicle Number: 2026

Waste Collected: 1250.75 kg

Number of Collection Points: 15

Vehicle Status: A

```
1B) import java.util.Scanner;  
  
  
public class WasteCollectionStatus {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);
```

```

// Read waste collected

System.out.print("Enter waste collected in kilograms: ");

double wasteCollected = sc.nextDouble();

// Check status using if-else
if (wasteCollected >= 100) {

    System.out.println("Collection Target Achieved");

} else {

    System.out.println("More Waste Collection Required");

}

sc.close();

}

}

```

INPUT: Enter waste collected in kilograms: 1260.5

OUTPUT:Collection Target Achieved

1C) import java.util.Scanner;

```
public class WasteCalculator {
```

```
    // Method to calculate total waste
```

```
    public static double calculateTotalWaste(double point1Waste, double point2Waste) {

        return point1Waste + point2Waste;

    }

```

```
    public static void main(String[] args) {
```

```
Scanner sc = new Scanner(System.in);

System.out.print("Enter waste collected at Point 1 (kg): ");
double point1Waste = sc.nextDouble();

System.out.print("Enter waste collected at Point 2 (kg): ");
double point2Waste = sc.nextDouble();

double totalWaste = calculateTotalWaste(point1Waste, point2Waste);

System.out.println("Total Waste Collected: " + totalWaste + " kg");

sc.close();
}
}
```

INPUT:Enter waste collected at Point 1 (kg): 50.9

Enter waste collected at Point 2 (kg): 80.8

OUTPUT: Total Waste Collected: 131.7 kg
